PROFESSIONAL SUMMARY

Final-year B.Tech (AI & Data Science) undergraduate graduating in 2027, with Oracle certifications in Java SE 11 and SQL, and hands-on experience building end-to-end web applications using Java, REST APIs, and relational databases (MySQL/PostgreSQL). Internship-proven ability to design CRUD-based data systems, implement REST web services, and apply data structures & algorithms to solve real-world problems. Strong foundation in Java OOP, JDBC-based database access, MVC design patterns, and best coding practices. Quick learner with exposure to Spring Boot and Agile methodologies.

TECHNICAL SKILLS

Core Languages: Java (SE 11 · OOP · Collections · Exception Handling), SQL, JavaScript, Python

Web Technologies: HTML5, CSS3, Bootstrap, REST API Design, JSON

Frameworks: Spring Boot (Familiar), Spring MVC (Familiar), Spring REST, FastAPI, Streamlit

Databases & ORM: MySQL, PostgreSQL, JDBC, Cosmos DB, Supabase

Testing & Quality: JUnit (Unit Testing), Mockito (Basic), Logging, Code Coverage Principles

Cloud & DevOps: Microsoft Azure (Blob Storage, Cosmos DB), Git, GitHub, Agile / Scrum

CS Fundamentals: Data Structures & Algorithms, MVC Architecture, OOP Design Principles, REST Architecture

INTERNSHIP EXPERIENCE

AI Intern | *Kauvery Hospital (Corporate Healthcare)*

Oct 2025 – Dec 2025

Digital Product Data Vault — Java · Python · PostgreSQL · MySQL · JDBC · REST API · Azure

- Designed and deployed a web application with a well-structured relational schema (entities, relationships, and CRUD operations) in PostgreSQL/MySQL, applying normalization best practices.
- Implemented REST-based data endpoints for create, read, update, and delete operations on monthly product datasets, ensuring secure data storage and schema validation.
- Used JDBC-style database access patterns to connect the application layer to the database, handling parameterized queries and connection management.
- Integrated Azure Blob Storage and Cosmos DB for cloud-backed file management; reduced data entry errors by ~30% through automated input validation.

AI Recruiter Application — Java · Python · REST API · NLP · MySQL · MVC Architecture

- Built an end-to-end recruitment web application following MVC design principles — separating business logic, data access, and presentation layers.
- Developed REST API endpoints for resume ingestion, NLP-based skill extraction, keyword matching, and candidate scoring, processing 100+ resumes per run.
- Applied data structures (hashmaps, priority queues) and algorithms for candidate ranking and keyword scoring, reducing manual screening effort by ~40%.
- Wrote unit test cases for scoring logic and implemented application logging for debugging and traceability.

Python Intern | *RedBack IT Solutions (IT Consulting)*

Aug 2025 – Sep 2025

Urban Route Optimizer — Python · OSMnx · NetworkX · Streamlit · REST · Graph Algorithms

- Developed a route optimization engine applying Dijkstra's algorithm and graph data structures on OpenStreetMap data, demonstrating strong DSA foundations.
- Built a responsive interactive UI displaying multi-route options, ETA, and distance for 5+ city profiles; optimized backend response time to under 2 seconds via caching.
- Designed REST-compatible service endpoints to decouple the routing engine from the frontend presentation layer.

PROJECTS

AI Recruiter — NLP Screening Pipeline | Java · Python · REST API · MySQL · MVC · NLP · JUnit

- Full-stack AI recruitment tool: Java-backed REST services for resume ingestion, NLP-based skill extraction, and ranked candidate shortlisting; frontend built with responsive HTML/CSS/Bootstrap.
- Applied MVC separation of concerns; wrote JUnit test cases for the scoring module; implemented SLF4J-based logging for audit trails.
- Achieved ~40% reduction in manual screening time; designed with pluggable scoring models for extensibility.

Digital Product Data Vault | Java · Python · PostgreSQL · JDBC · Azure · REST API

- Cloud-integrated data management system: designed relational schema (entities, FK relationships), wrote CRUD SQL queries in MySQL/PostgreSQL, and exposed data via RESTful endpoints.
- Implemented JDBC-based database connectivity for structured product datasets with schema validation, audit logging, and Azure Blob Storage backend.

Urban Route Optimizer | Python · Graph Algorithms · DSA · REST · HTML/CSS/Bootstrap

- Graph-based city route optimizer using real-world OpenStreetMap data; demonstrates applied DSA (Dijkstra's algorithm, graph traversal) and multi-profile support (car, bike, pedestrian).
- Responsive UI with live ETA calculation; sub-2-second query performance via optimized graph loading and caching strategies.

CERTIFICATIONS

Oracle Certified Professional — Java SE 11 Developer (100878330OCPJSE11)	· Oracle	Dec 2024
Oracle Cloud Infrastructure — SQL (OC5306507)	· Oracle	Nov 2024
Introduction to Agile (10071441)	· Certified	Apr 2026

EDUCATION

B.Tech — Artificial Intelligence & Data Science	· Saveetha School of Engineering, Saveetha University	2023 – 2027
CGPA: 8.40 / 10.0		
Higher Secondary (CBSE)	· Sunbeam International School	2021 – 2023
72% — Mathematics, Physics, Computer Science		
Senior Secondary (CBSE)	· Balsam Academy	2019 – 2021
70%
